

FIG. 1

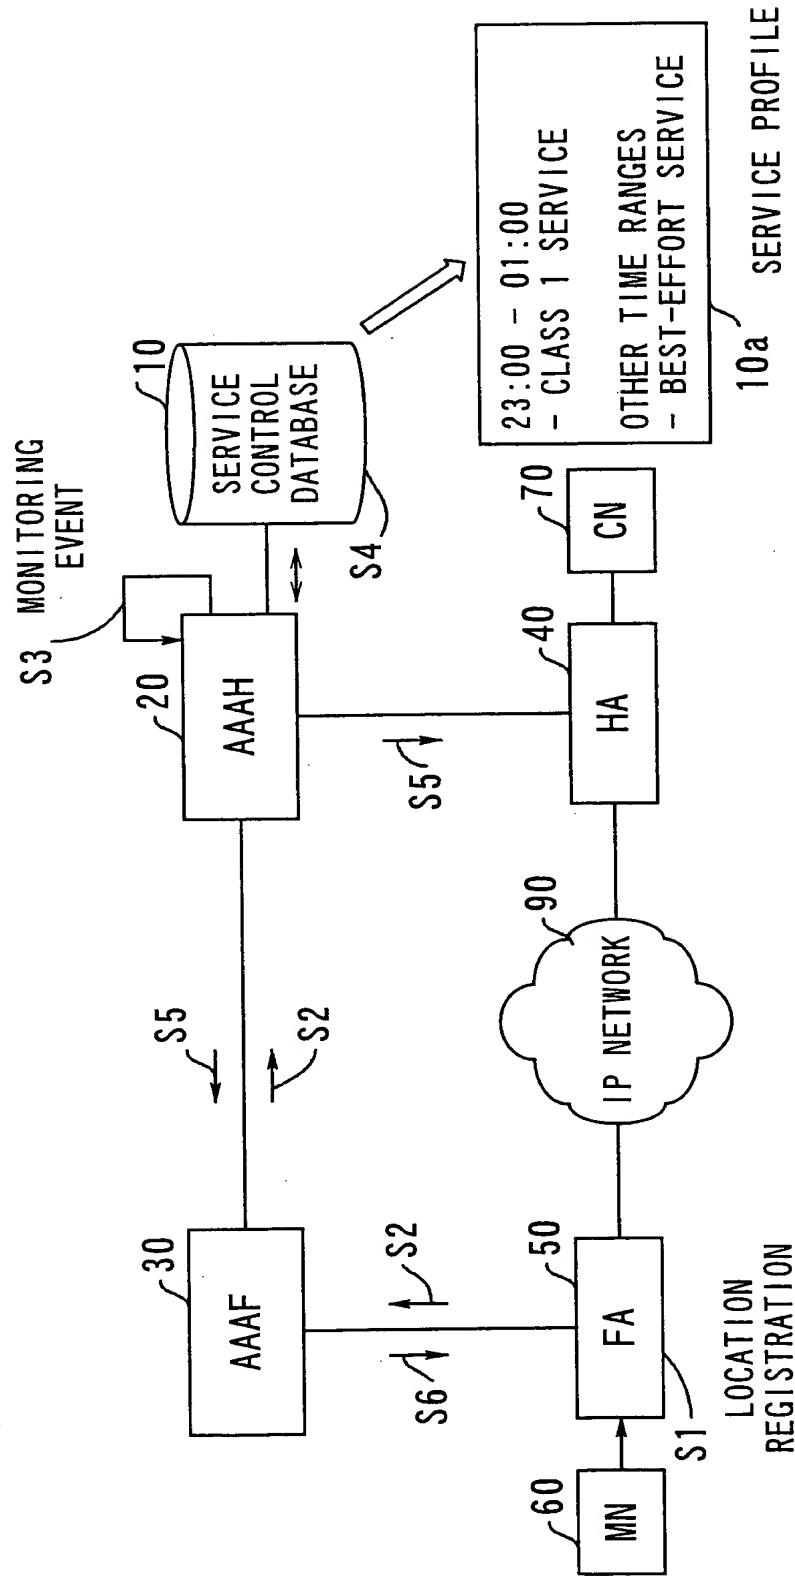

FIG. 2

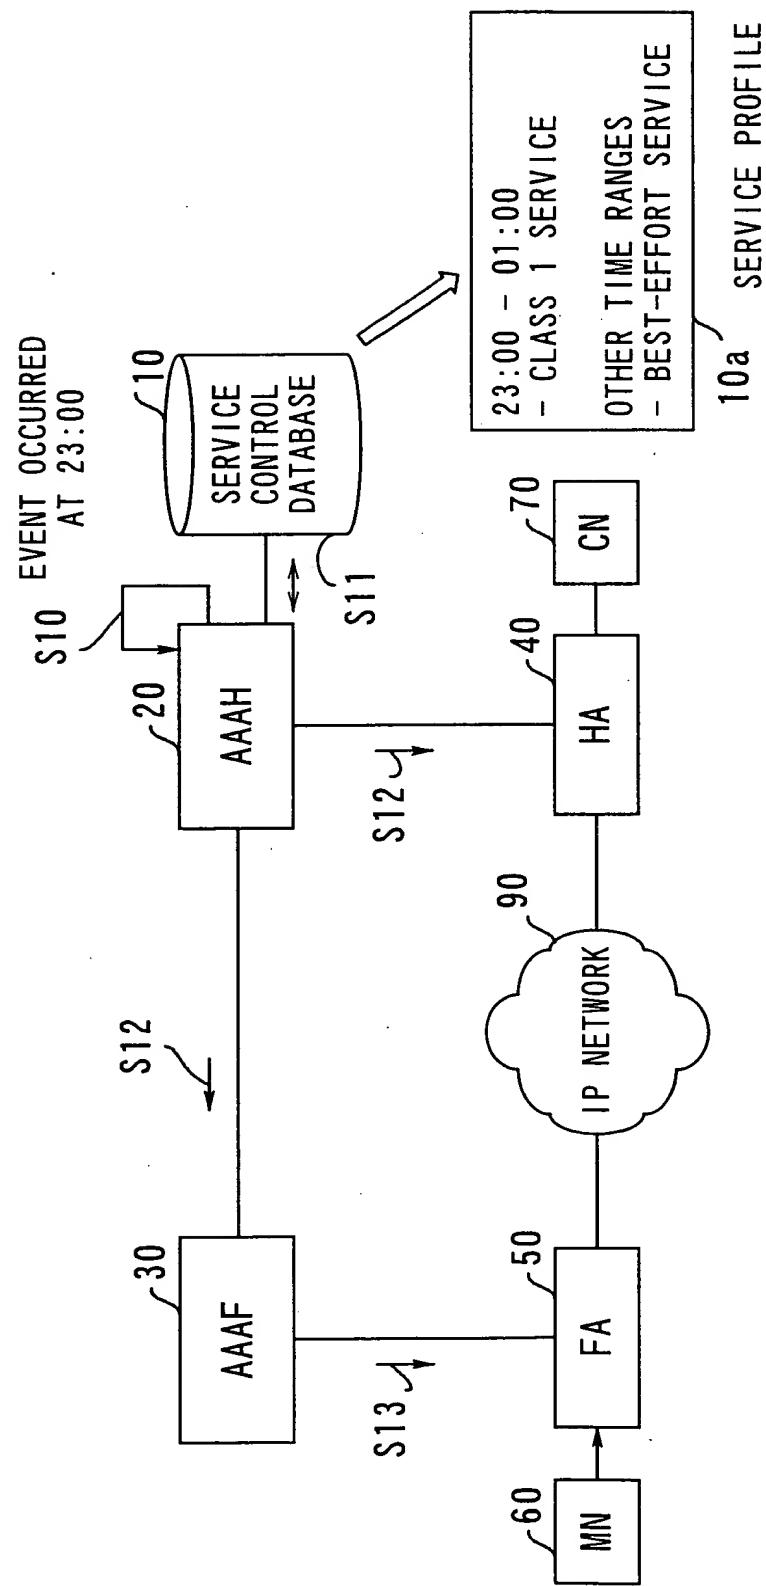

FIG. 3

10a SERVICE PROFILE

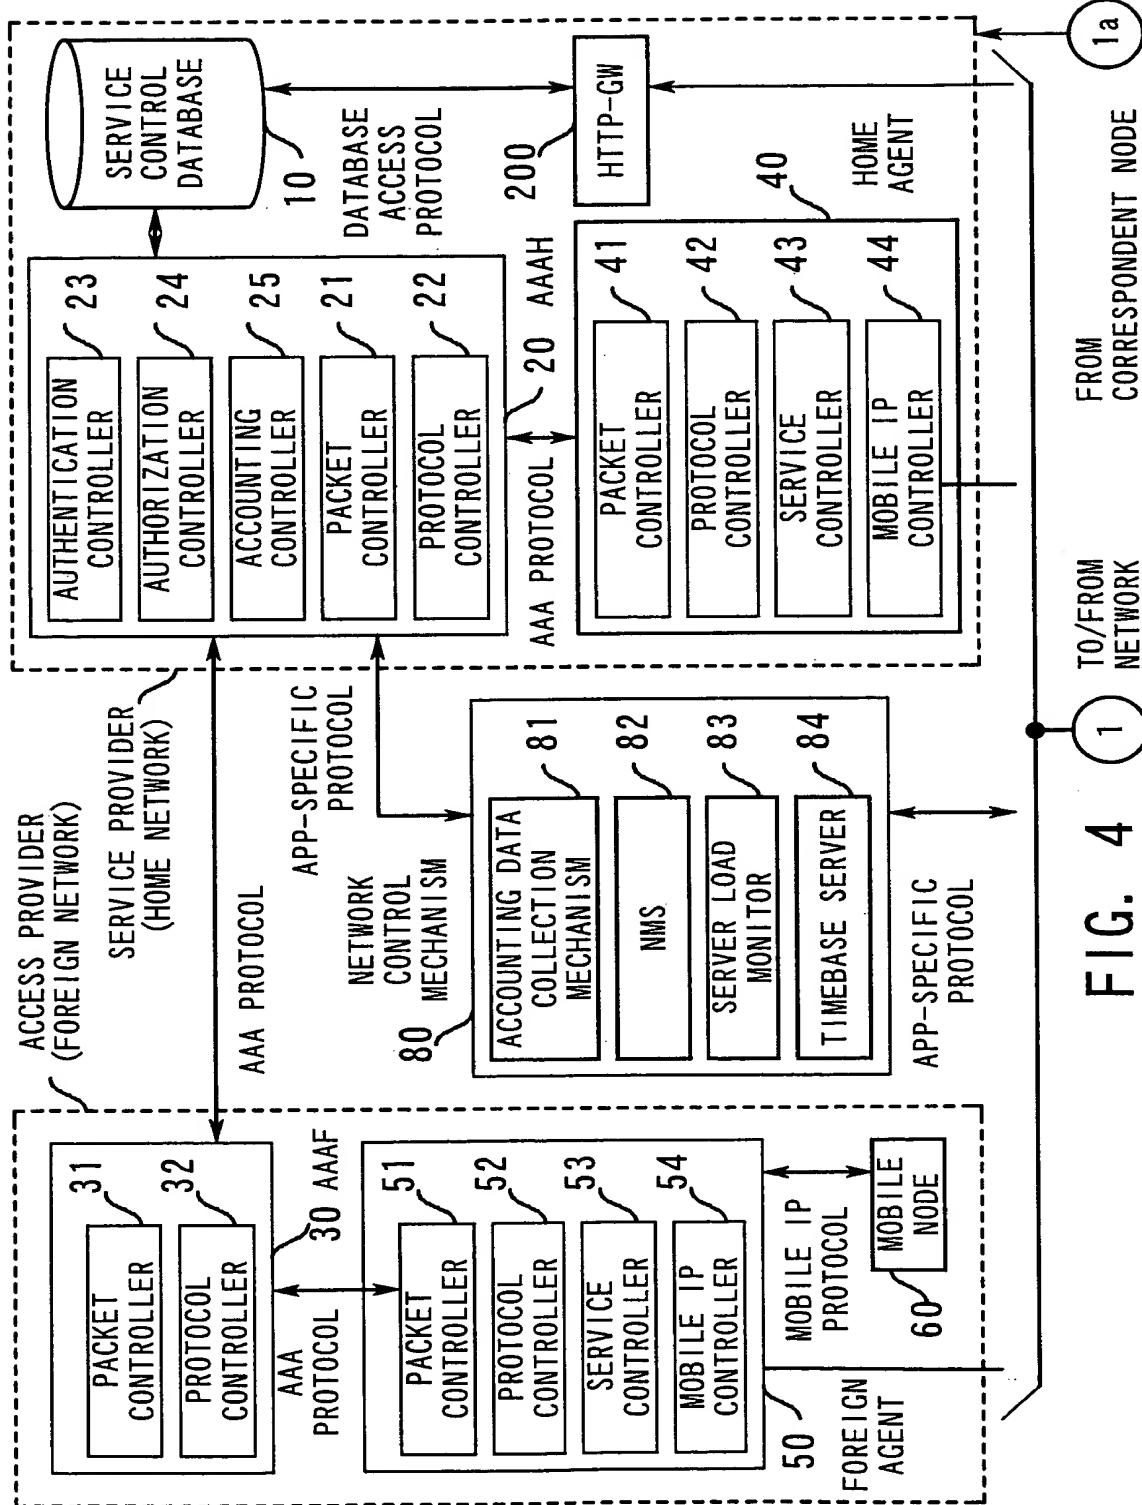

FIG. 4 1 TO/FROM NETWORK FROM CORRESPONDENT NODE

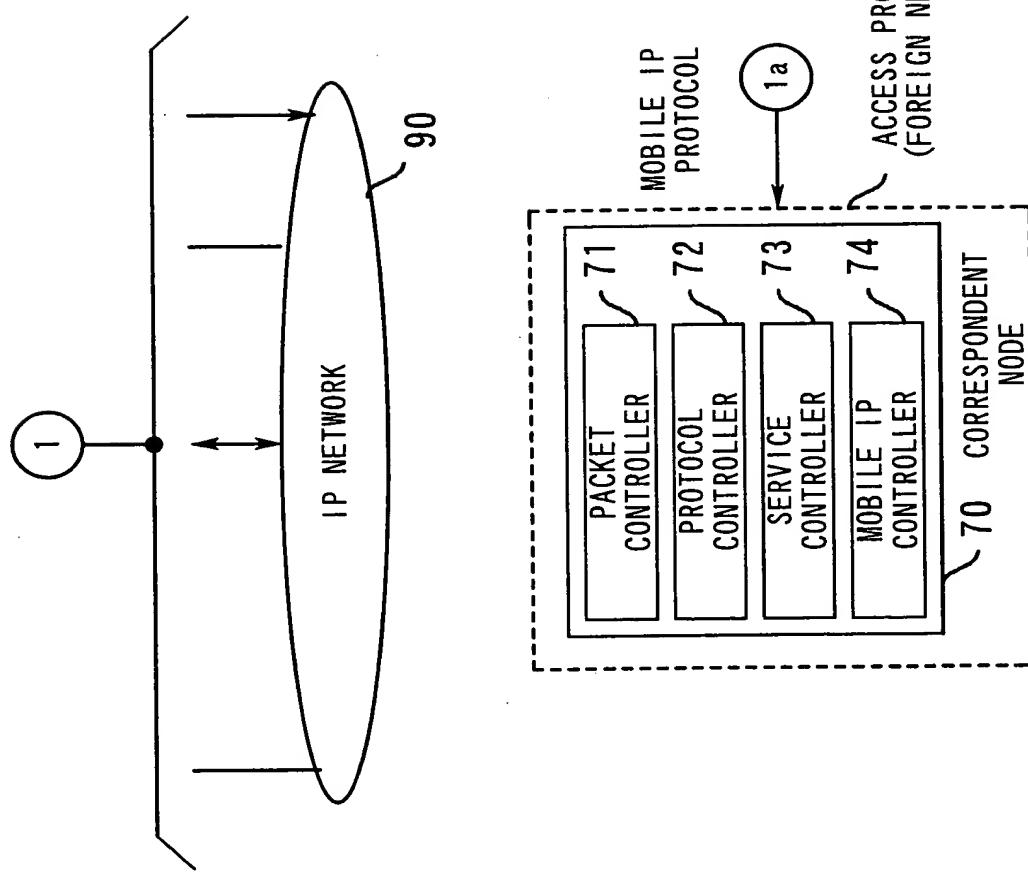

FIG. 5

Data Items		Detailed Data Items	Description
Profile Identifier	Session Identifier	Profile Number	Indicate session type
	Source Address		Uniquely assigned to each session
Packet Extraction Parameters	Source Port No.	Destination Address	Packet filtering rules
	Destination Port No.		
Routine/ Packet Editing Parameters	Encapsulation (Encryption) Method	Routing Address (Multiple Entries Allowed)	How to encapsulate packets to be routed
	Type of Service (TOS)		IP address of the next node
	Decapsulation Command		TOS field value to be set to IP header
10-3			Request for decapsulation
			Designate which control table to search
10-4	Individual Control Data		<ul style="list-style-type: none"> – service profile cache – binding cache – MIP home (mobility binding) – MIP foreign (visitor list) – ANYCAST (extended visitor list) – routing table
		Control Data Identifier	Pointer to an intended part of the table

FIG. 6

Service Profile Cache		Description
Source SPC (NSPCsrc)		A collection of service profiles to be used mainly for user-independent, common services. Indexed by source address information of data packets. Created by a mobility agent at the time of initial set-up, based on static information stored in hard drives and other storage devices of network equipment.
Source Default SP (NDSPsrc)		Service profile applied when there is a hit in NSPCsrc, but no hit in individual control tables.
Node-specific SPC (NSPC)	Destination SPC (NSPCdst)	A collection of service profiles to be used mainly for user-independent, common services. Indexed by destination address information of data packets. Created by a mobility agent at the time of initial set-up, based on static information stored in hard drives and other storage devices of network equipment.
SPC	Destination Default SP (NDSPdst)	Service profile applied when there is a hit in NSPCdst, but no hit in individual control tables.
	Default SP (NDSP)	Default service profile used when no hit is found. For retrieval of a network device-specific control table (routing table).
AAA Communication (ASPC)	Source SPC (ASPCsrc)	A collection of user-specific service profiles. Indexed by source address information of data packets that are sent from AAA systems when a mobile node logs in to the network.
	Destination SPC (ASPCdst)	A collection of user-specific service profiles. Indexed by destination address information of data packets that are sent from AAA systems when a mobile node logs in to the network.

Search Order	Cache Class	Cache Search Result	Individual Control Data Search Result	Next Action
1	ASPCsrc	Hit	Hit	Normal end
		No Hit	No Hit	Abnormal end
2	NSPCsrc	Hit	Hit	Search NSPCsrc
		No Hit	No Hit	Normal end
3	ASPCdst	Hit	Hit	Search NDSPsrc
		No Hit	No Hit	Normal end
4	NSPCdst	Hit	Hit	Search ASPCdst
		No Hit	No Hit	Normal end
5	NDSP	Hit	Hit	Normal end
		No Hit	No Hit	Abnormal end

502

FIG. 8

Item	Description
Session ID	<NAI of Mobile Node><32-bit Value><Optional Value>
Session Timer	Remaining lifetime of this transaction

511

FIG. 9

Item	Description
Session ID	<NAI of Mobile Node><32-bit Value><Optional Value>
AAAH Address	IP address of AAAH identified by mobile node NAI
Home Agent Address	IP address of home agent allocated by AAAF
Previous Foreign Agent NAI	NAI of previous foreign agent to which the mobile node was attached
Current Foreign Agent NAI	NAI of foreign agent to which the mobile node is currently attached
SCR Requester Address	IP address of AAAH that is requesting SCR
Security Information	Authentication data for validate association between this AAAF and other entities (FA, AAAH, HA allocated by AAAH)
Session Timer	Remaining lifetime of this transaction
Foreign Agent Service Profile	See FIG. 3
Home Agent Service Profile	See FIG. 3
Current State	Waiting, HA requested, AMA in process, HA Change Requested, FA Change Requested

512

FIG. 10

513

Item	Description
Session ID	<NAI of Mobile Node><32-bit Value><Optional Value>
Home Agent Address	IP address of home agent allocated by AAAH
HA-managing AAAF Address	IP address of AAAF that is allowed by AAAH to allocate home agent
Current AAAF Address	IP address of AAAF requesting AMR
Previous AAAF Address	IP address of previously used AAAF
Address Proxy Address	IP address of address proxy in ANYCAST service
Security Information	Authentication data for validate association between this AAAH and other entities (HA, AAAF)
Session Timer	Remaining lifetime of this transaction
Address Proxy Server Address	IP address of address proxy server
Foreign Agent Service Profile	See FIG. 3
Home Agent Service Profile	See FIG. 3
Current State	Waiting, HA Requested, AMA in Process, HA Change Requested, FA Change Requested

FIG. 11

514

Item	Description
Session ID	<NAI of Mobile Node><32-bit Value><Optional Value>
Session Timer	Remaining lifetime of this transaction
Mobility Binding	Pointer to mobility binding
SCR Request Flag	Flag indicating that service profile is being updated in correspondent node
SCR Requester Address	IP address of the entity requesting SCR

FIG. 12

520

Item	Description
IP Source Address (Home Address)	Home address assigned to mobile node. Notified by registration request or AMA message
Link Layer Source Address of Mobile Node	Link layer (MAC) address of mobile node
UDP Source Port	UDP Source port of mobile node
Home Agent Address	Address of home agent. Provided in registration request or AMA message
Registration Request Identifier	Identifier used to associate between request and response
Lifetime	Valid period of registration request
Authentication Data	Authentication data used by foreign agent to authenticate requesting mobile node

FIG. 13

Item	Description
Home Address	Home address assigned to mobile node
Care-of Address of Mobile Node	IP address of foreign agent to which mobile node is currently attached
Correspondent Node with Route Optimization	IP address of correspondent node to which route optimization is being applied
Registration Request Identifier	Identifier used to associate between request and response
Lifetime	Valid Period of Registration Request
Authentication Data	Authentication data used by foreign agent to authenticate requesting mobile node

521

FIG. 14

Item	Description
User NAI	User's Network Access Identifier (NAI)
User Profile	User name, Address, Phone No. etc.
User Authentication Data	Mobile Node-AAA Authentication Key, SPI, User ID, Password
Service Level Agreement (SLA)	Service agreement with customer
Service-specific Profile	Diffserve, Packet Filtering, ANYCAST, Multi Cast, etc

FIG. 15

Service Class	Description
Class A	Maximum transmission delay is guaranteed to be within a prescribed tolerance
Class B	In Diffserv, high priority queuing is applied as long as it does not affect Class A traffic. May be divided into several subclasses, depending on Diffserv types
Class C	Best-effort service. Lower priority queuing than Class B.

531

FIG. 16

Item	Description
Flat-rate Accounting (Fixed charge for limited hours, plus additional charge for excess hours)	$(\text{Service Class-dependent Basic Charge}) + (\text{Service Class-dependent Hourly Rate}) * (\text{Excess Hours})$
Usage-based Accounting (Proportional to the amount of packets transferred)	Summation of $[(\text{Service Class-dependent Rate}) * (\text{Total Amount of Packets Transferred to/from Edge Node (Foreign Agent)})]$

FIG. 17

533

Control Parameters	Description
Charge	System warns the user when the amount of service charges has exceeded a limit predefined by the user, prompting him/her to decide whether to continue the service.
Time	User may choose a more affordable service which is available only in low-traffic hours. User may choose variable-class service which provides different levels of service depending on the time of day.
Service Class	User may choose variable-class service which provides different levels of service depending on the type of applications, or type of packets, to minimize the usage-based charge.
Roaming Option	User may enable roaming option with additional cost. User may cut the cost by disabling roaming option.
